

CLAREMONT ANGUS

Lot 6

ON PROPERTY SALE

Friday 16th February 2024, 1.00pm

CLAREMONT ANGUS

— 2023 —

Melbourne Royal Show

Grand Champion Carcase

Paddock to Plate!

A purebred **Claremont Angus Steer** took out the **Grand Champion Carcase** in the **2023 Melbourne Royal Show Beef Carcase Competition**. Exhibited by **Grant High School, Mt Gambier SA** and bred by Claremont Angus, the carcase first took out both the **Champion Export Carcase**, as well as **Champion Schools Carcase** and then went on to win **Grand Champion Carcase**.

This steer had a live weight of 584kg, a hot score carcase weight of 319kg, an MSA Index of 63.51 and a total score of 91.69/100.

He was a son of **Musgrave Stunner** out of a **Beast Mode** daughter. We are extremely proud of this achievement, it is really showing the strength in our breeding program.

Thank you Grant High School for a brilliant job of preparing our steer.

CLAREMONT ANGUS ON PROPERTY SALE

Offering:

60 APR Angus Bulls March/April 2022 drop

(All Sale bulls free of genetic birth defects)

Friday 16th February 2024, 1.00pm

3% rebate to outside agents registering their clients in writing by 5pm on the working day prior to the sale day. The agent must accompany buyer on sale day and settle for clients within 7 days.

CLAREMONT ANGUS

Sale Conditions:

We are pleased to offer our bulls in the same format as last year. Our sale will be conducted as an auction but not through the bull ring. The bulls will remain in their pens. The sale will be conducted in a shed close by. To aid you in purchasing the bulls, there will be a large TV screen inside. Each bull has been videoed a few weeks prior, then on Sale day, shown on the screen in lot order and auctioned. More time in viewing the bulls before the sale commences is highly recommended

We have done this for a number of reasons; Occupational Health and Safety issues and time involved for preparation of the sale. We also think it is less stressful on the bulls.

Bull Health:

All bulls have been vaccinated with Ultravac 7 in 1, Vibrovax, Pestigard, Rhinogard IBR for BRD and drenched with Dectomax V prior to sale day. We recommend a booster of Ultravac 7 in 1, Vibrovax, Pestigard and semen testing prior to joining. We also recommend you discuss with your vet about repeat vaccinations for Rhinogard IBR in line with the industry Immune Ready Guidelines recommendations.

History:

Angus cattle were first introduced to *Claremont* in 1940 with the purchase of 40 heifers from the Kahlua Stud. New bloodlines were added with the purchase of bulls from the annual Angus sales at Wodonga. In the late 1960's it was decided to breed our own bulls from our own specially selected cows.

This meant we could breed Angus cattle with their own stamp and particular style, unique to *Claremont*. With vast improvement in AI techniques and astute blending of worldwide genetics, we believe each new drop of calves is better than the last.

Our aim for the future is a blend of muscle, structure and growth in a consistent package year in year out.

Inspection of Cattle:

Bulls can be viewed on the day of the sale, or prior inspection by arrangement.

Free Delivery:

To farm gate within 100 kms from Claremont immediately after the Sale.

OR

To all major livestock selling centres on Eastern Seaboard to Southern Queensland.

Insurance:

All cattle are at the purchaser's risk from the fall of the hammer. We recommend all cattle be insured.

12 Month Guarantee & Fertility:

As with any species, fertility can be a problem. This is why Claremont Angus semen test ALL sale bulls, this testing was done on the 5th February 2024. Bulls are examined by Nationwide Artificial Breeders Pty Ltd for erection abnormalities and satisfactory sperm count specifications. The visual test identifies penile warts, hair rings, injuries and penile frenulums by undergoing a physical examination of external genitalia and conformation. The crush side semen test involves qualified analysis of spermatozoa for motility, concentration, morphology and semen infections such as seminal vesiculitis. This information provides testicular and epididymal function which helps predict the potential fertility of the bull. Only bulls that pass this strict testing regime are certified and make the sale listing.

This testing was done by Drew Pickford from Nationwide Artificial Breeders. Buyers shall receive proof of fertility of each purchased bull after the sale.

In the unlikely event of a bull proving to be infertile or incapable of natural service the vendor will credit the purchase price to be used at the next sale, less the salvage value of the bull provided the problem is not caused by injury or disease contracted since taking delivery.

Any claim must be accompanied by a relevant veterinary certificate.

STUD STOCK BUYER

Claremont aim to maximise the reproductive integrity and health of their stud stock by adopting the Zoetis STAR Program - this is **Steps Taken Against Reproductive disease.**

Each Zoetis STAR certified animal bull in this catalogue has been

- Tested to show that they are not Bovine Viral Diarrhoea (BVDV) Persistently Infected (PI) animals
- Vaccinated against BVDV to ensure they are protected to the effects of this infection
- Vaccinated against Leptospirosis, a potential reproductive and OH&S risk for cattle handlers
- Vaccinated against Vibriosis, a sexually transmitted cattle disease
- Given 2 vaccinations to ensure they have immunity established prior to leaving these premises
- Issued with a Zoetis STAR certificate - valid for 12 months

You can be confident that every step has been taken by this stud breeder **Claremont** to ensure that these animals presented for sale will not introduce preventable reproductive diseases into your heard.

Contact Zoetis for further information on

How to Register and Bid on AuctionsPlus

- 1 Go to www.auctionsplus.com.au to register at least 48 hours before the sale.
- 2 Select "Sign Up" in the top right hand corner.
- 3 Fill out your name, mobile number, email address and create a password.
- 4 Go to your emails and confirm the account.
- 5 Return to AuctionsPlus and log in.
- 6 Select "Dashboard" and then select "Request Approval to Buy".
- 7 Fill in buyer details and once completed go back to Dashboard.
- 8 Complete buyer induction module (approx. 30 minutes).
- 9 AuctionsPlus will email you to let you know that your account has been approved.
- 10 Log in on sale day and connect to auction.
- 11 Bid using the two-step process – unlock the bid button and bid at that price.
- 12 If you are successful, the selling agent will contact you post sale to organise delivery and payment.

UNDERSTANDING THE TRANSTASMAN ANGUS CATTLE EVALUATION (TACE)

What is the TransTasman Angus Cattle Evaluation?

The TransTasman Angus Cattle Evaluation is the genetic evaluation program adopted by Angus Australia for Angus and Angus influenced beef cattle. The TransTasman Angus Cattle Evaluation uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (e.g. weight, carcass, fertility).

The TransTasman Angus Cattle Evaluation is an international genetic evaluation and includes pedigree, performance and genomic information from the Angus Australia and Angus New Zealand databases, along with selected information from the American and Canadian Angus Associations.

The TransTasman Angus Cattle Evaluation utilises a range of genetic evaluation software, including the internationally recognised BLUPF90 family of programs, and BREEDPLAN® beef genetic evaluation analytical software, as developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England, and Meat and Livestock Australia Limited (MLA).

What is an EBV?

An animal's breeding value can be defined as its genetic merit for each trait. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates of an animal's true breeding value are called EBVs (Estimated Breeding Values).

EBVs are expressed as the difference between an individual animal's genetics and a historical genetic level (i.e. group of animals) within the TACE genetic evaluation, and are reported in the units in which the measurements are taken.

Using EBVs to Compare the Genetics of Two Animals

TACE EBVs can be used to estimate the expected difference in the genetics of two animals, with the expected difference equating to half the difference in the EBVs of the animals, all other things being equal (e.g. they are joined to the same animal/s).

For example, a bull with a 200 Day Growth EBV of +60 would be expected to produce progeny that are, on average, 10 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +40 kg (i.e. 20 kg difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Or similarly, a bull with an IMF EBV of +3.0 would be expected to produce progeny with on average, 1% more intramuscular fat in a 400 kg carcass than a bull with a IMF EBV of +1.0 (i.e. 2% difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Using EBVs to Benchmark an Animal's Genetics with the Breed

EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Angus or Angus infused animals recorded with Angus Australia.

To benchmark an animal's genetics relative to other Angus animals, an animal's EBV can be compared to the EBV reference tables, which provide:

- the breed average EBV
- the percentile bands table

The current breed average EBV is listed on the bottom of each page in this publication, while the current EBV reference tables are included at the end of these introductory notes. For easy reference, the percentile band in which an animal's EBV ranks is also published in association with the EBV.

Considering Accuracy

An accuracy value is published with each EBV, and is usually displayed as a percentage value immediately below the EBV.

The accuracy value provides an indication of the reliability of the EBV in estimating the animal's genetics (or true breeding value), and is an indication of the amount of information that has been used in the calculation of the EBV.

EBVs with accuracy values below 50% should be considered as preliminary or of low accuracy, 50-74% as of medium accuracy, 75-90% of medium to high accuracy, and 90% or greater as high accuracy.

Description of TACE EBVs

EBVs are calculated for a range of traits within TACE, covering calving ease, growth, fertility, maternal performance, carcass merit, feed efficiency and structural soundness. A description of each EBV included in this publication is provided on the following page.

UNDERSTANDING ESTIMATED BREEDING VALUES (EBVS)

Category	Trait	Unit	Description	Impact
				Higher EBVs indicate
Calving Ease/Birth	CEDir	%	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	CETrs	%	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
	GL	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
	BW	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.
Growth	200 Day	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
	400 Day	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
	600 Day	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
	MCW	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
	Milk	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
Fertility	DtC	days	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
	SS	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.
Carcass	CWT	kg	Genetic differences between animals in hot standard carcass weight at 750 days of age.	Higher EBVs indicate heavier carcass weight.
	EMA	cm ²	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate larger eye muscle area.
	Rib Fat	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more fat.
	P8 Fat	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcass.	Higher EBVs indicate more fat.
	RBV	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcass.	Higher EBVs indicate higher yield.
	IMF	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more intramuscular fat.
Feed/Temp.	NFI-F	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.
	Doc	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temperament.
Structure	Claw Set	score	Genetic differences in claw set structure (shape and evenness of claws).	Lower EBVs indicate a lower score.
	Foot Angle	score	Genetic differences in foot angle (strength of pastern, depth of heel).	Lower EBVs indicate a lower score.
	Leg Angle	score	Genetic differences in rear leg structure when viewed from the side (angle at front of the hock).	Lower EBVs indicate a lower score.
Selection Index	SA	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems.	Higher selection indexes indicate greater profitability.
	SA-L	\$	The SA-L index is similar to the SA index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low. While the SA aims to maintain mature cow weight, the SA-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.	Higher selection indexes indicate greater profitability.
